

SkyView IBM i Security Compliance Solution

A fully installed and configured Security Compliance reporting solution for your IBM i (iSeries) servers

Whether you have to prove that you're compliant with your policy requirements or you simply want the information to help you with your security administration tasks, generating reports that provide this information is time consuming and labor intensive. Most regulations governing data privacy and security (PCI, Sarbanes Oxley, HIPAA, etc) require you to know about your risk exposure and prove you are regularly checking your systems' compliance status. The reports that show the differences between your policy and the current configuration settings are vital for both regulatory compliance as well as security administration tasks. But who has the time to generate these reports?

The SkyView IBM i Security Compliance solution is "turnkey." For one price, you get a package that includes software licenses, installation, risk reporting and policy report configuration. SkyView support staff* sign on to your system to install and configure the products. In addition, we go a step further and setup job scheduler entries and email for automated delivery of reports. The final result is that you receive regular risk assessment updates and compliance reports that document and help you monitor*:

- Inactive profiles.
- Default passwords.
- Password expiration exceptions.
- Profiles that should not have a password.
- Profiles with special authorities.
- Limited capability users.
- Public and private authorities for user profiles.
- Access controls on files containing critical data
- Access controls on directories containing critical data.
- Access controls on secured source files.
- System value settings including auditing and password rules.

* Not all scenarios listed above may apply to all systems.

With this solution, there is NO setup on your part. Rather, the reports containing this important security compliance information are delivered with regular frequency right to your Inbox.

How it works:

Step 1: SkyView support team signs onto your system and installs SkyView Risk Assessor.

Step 2: SkyView support team installs Policy Minder and configures the templates used to generate reports for the scenarios described previously.

Step 3: SkyView support team creates job schedule entries to generate regular Risk Assessor and Policy Minder reports

Step 4: SkyView support team configures the reports to be sent to the appropriate email addresses.

Results: You receive regularly scheduled reports. Use these reports to view your systems' latest risk assessment and deviations (if any) from your policy requirements.

You spend NO time installing the software. You spend NO time configuring the software. You spend NO time scheduling the reports or configuring the email delivery. Your time is valuable! Let the SkyView support team do the work, while you reap the benefits of automated compliance reporting.

The Details:

- Security Compliance Solution is sold as a subscription.
- A one year commitment is required.
- Price varies based on processor group.
