

What is the Policy Minder Real Time Add-on powered by DataThread?

Policy Minder is a **compliance management tool** designed to take a snapshot of your security compliance relative to your stated security policy.

Policy Minder Real Time Add-on powered by DataThread uses Innovatum's DataThread technology to capture events affecting compliance as they occur and notifies the security officer via email. The real-time notification identifies WHO made the change and provides the recipient with the option of running a Policy Minder compliance check to determine if the action has placed the system out of compliance with its policy. If it has, a subsequent notification will provide the recipient with the option to run the Policy Minder FixIt function to correct the issue and bring the system back into compliance.

Policy Minder Real Time Add-on powered by DataThread

With Policy Minder you can:

- Document your security policy
- Implement object level security
- Prove to auditors that you are in compliance with your policy.
- Enforce compliance with your policy settings

With the Policy Minder Real Time Add-on powered by DataThread you can

1) Receive email notification immediately when a change occurs to:

- Security System Value Settings
- User profile settings
- Library authorities
- Object authorities
- Directory authorities
- Command authorities

2) Capture WHO made the change.

3) Have the option of running a Policy Minder compliance check or FixIt or both

SkyView Policy Minder reduces the effort required to gather data and create compliance reports from days to just a few minutes. The Policy Minder Real Time Add-on expands the capability of SkyView Policy Minder beyond compliance management to continuous compliance monitoring and management. The Add-on assures that no compliance events occur between reporting cycles go unnoticed. The Real Time Add-on captures what was changed, who changed it and leverages the "Compliance Check" and "FixIt" functionality of SkyView's Policy Minder to address the event immediately after it happens.

Who developed the Policy Minder Real Time Add-on powered by DataThread?

The Real Time Add-on was developed by **Innovatum** using their unique **DataThread** technology and in cooperation with SkyView's Carol Woodbury.

- **Innovatum** is the industry leader in real time monitoring of changes to database files and monitoring of the system audit journal. **Innovatum** products include extensive workflow, notification and program execution capabilities.
- Carol Woodbury is the former AS/400 Security Architect and Chief Engineering Manager of Security Technology for IBM's Enterprise Server Group, noted author, award winning presenter and President and co-Founder of SkyView Partners Inc.

Policy Minder is designed to be easy-to-use and save you hours of work when defining your policy, gathering data, analyzing data, and running reports to show auditors where a system is relative to compliance requirements. The **Policy Minder Real Time Add-on powered by DataThread** provides continuous compliance monitoring and notification of compliance events.

Policy Minder Real Time Add-on powered by DataThread runs on:

OS/400 and i5/OS V5R1 and higher.

Pricing: Contact SkyView Partners or **Innovatum** or an authorized reseller.
